

## Lesson 14 Questions

What is the <span> tag used for?

When is it appropriate to assign an id to an html element?

When is it appropriate to assign a class to an html element?

A <div> has been assigned an id of “content”. Explain the meaning of the following css code. Note the definition does **not** have a comma following #content

```
#content h1{  
    font-size: 14pt;  
}
```

A <div> has been assigned an id of “content”. Explain the meaning of the following css code. Note the definition has a comma following #content

```
#content, h1{  
    font-size: 14pt;  
}
```

Why is it helpful to have the CSS (style) separate from the HTML (content) for a website which has many web pages?
