

Lesson 30 Questions

What property and value should you give a DIV if you want all content that does not fit into the DIV to be hidden?

For a horizontal slider (such as in the video), what property should be changed to move the slider back and forth?

For a vertical slider, what property should be changed to move the slider up and down?

If you intend to have 6 slides that are each 200px wide in a horizontal “slider” div, how wide does your slider need to be?

What is the purpose of **javascript:void(0)** ?
