

## Lesson 35 Questions

Write the code to define and apply an image map to the above image (which will be saved as “menu.jpg”) so that there is a rectangular hotspot on each menu item. Use the rulers to estimate the coordinates for each rectangle. HOME should link to “index.html”, OUR CAUSE should link to “cause.html”, and DONATE should link to “donate.html”.

**More questions on next page!**

When defining the hotspots (or areas) of an image map, what are the three possible values you can use for the shape attribute.

In the video, what was GIMP used to do?

When is it a good idea to use an image map (as opposed to just breaking the image up into several smaller images)?
