

Lesson 37 Questions

Assume you have the following HTML elements:

```
<div id="rock"></div>
```

```
<div id="paper"></div>
```

```
<div id="scissors"></div>
```

Each div is styled with CSS and includes a width and height and an absolute position. The "rock" div has a z-index of 10. The "paper" div has a z-index of 20. The "scissors" div has a z-index of 30. If the divs are positioned so that they are overlapping, which one will appear on top?

In JavaScript, what code would increase a variable named **score** by 5?

In JavaScript, what **shorthand** code would increase a variable named **score** by 1?
