

Lesson 39 Questions

What is Responsive Web Design?

Explain **what** the following javascript/jquery code does and **when** it runs:

```
$(window).resize(function(){  
    $('.gallery').css('display', 'none');  
});
```

What:

When:

What line of code would you in HTML to link to a css file that is only to be used for devices that have a screen and a max-width of 480px?

Width is not sufficient for determining the actual size of a device. What other factor that varies from device to device effects how large something will be showing on the screen?
